## Education

### Bachelor of Science in Computer Science

Virginia Tech

GPA: 3.87/4.0

Aug. 2019 – May 2021

Blacksburg, VA

### Associate of Science in Computer Science

Virginia Western Community College

GPA: 3.74/4.0

Aug. 2016 – May 2019

Roanoke, VA

## Technical Skills

**Languages:** C#, JavaScript/TypeScript, Java, Python, Bash, Powershell, C/C++, HTML/CSS, SQL

**Developer Tools:** Rancher Desktop, Docker Desktop, Visual Studio, Visual Studio Code, Nexus, Harbor

**Technologies/Frameworks:** GitLab CI/CD, Docker, Kubernetes, Helm, Angular, .NET Core/Framework, WPF, Linux, Inno Setup

**Certifications:** CompTIA Security+

## Experience

### Lockheed Martin

June 2021 – Present

*Software Engineer Senior*

*King of Prussia, PA*

- \* **Product Owner** - Product Owner for an Architecture Runway team. Prior to being PO, I had worked on that team since I started at Lockheed Martin. Using my experience from customer feedback and designing/implementing my team's solutions, I designed backlogs to resolve issues negatively affecting user experience and program cost/efficiency. The DevSecOps products my team owned were the software installer and CI/CD Pipelines. I designed a solution with my team to overhaul 15 year old software to completely optimize its user experience. This involved overhauling the entire user facing portion of the installer and a large part of the backend. We're creating an optimized GUI workflow, switching to a FOSS installer framework, and minimizing user prompts. The team designed an automated end to end CI/CD pipeline solution to improve cost savings and testing quality/efficiency. The automated end to end solution involved a custom test execution framework, Gitlab Pipelines, Windows VMs, automated software installation, remote test execution, and result capture.
- \* **Software Development** - Contributed software engineering expertise in an agile environment to create full stack applications and services. Work included development on full stack solutions with WPF desktop applications, .NET Core micro services, Angular web development, containerization, and DevSecOps tools. In my current role I'm working on simulation tools and digital twins for test and training.
- \* **CI/CD and DevSecOps** - Designed and Contributed to solutions like containerized Gitlab Pipelines for front end applications, microservices, common libraries, Docker images, containerized Kubernetes deployment solutions used to install onto our target environment, and automated kubernetes deployments via helm. Other notable work includes migration of a Monorepo to a Polyrepo GitLab project structure, designed/implemented automated local deployment solution to a k3s cluster in our production environment, and contributed to design/implementation of CI/CD processes for development and software installation tools for customer and test teams.
- \* **Research and Development** - Contributed to research and development of new applications/services and tools using new frameworks and technologies to win new contracts for our program. Participated in presentations to show customers research and development efforts. Contributed to trade studies to determine best tools for a given solution.

## Projects

### BDM Document Parser Web App | *Angular, Flask, MySQL, TypeScript, HTML/CSS, Python*

May 2021

- \* Developed a web application to parse bulk pdf documents to be uploaded to the Banner Document Management System for the Virginia Tech College of Engineering Advising Staff.
- \* Implemented an Angular based frontend to create an easy to use interface to allow users to upload bulk pdf's, add/remove/manage document types, term codes, users, and user privilege level.
- \* Utilized a Linux virtual machine to serve the application by using Nginx and Unicorn.
- \* Implemented backend using Flask to allow for parsing and uploading of sub-documents within a given bulk document.

### GetFit, Fitness/Nutrition Mobile App | *iOS, XCode, SwiftUI, Swift*

Dec. 2020

- \* Created an iOS mobile app to manage fitness and nutrition using SwiftUI on XCode.
- \* This app allowed users to track meals, locate gyms, track weight progress, and lookup nutritional info on foods.
- \* We developed these features using various api's such as Image Charts, Nutritionix, and Google Maps.
